

TimeManagement Corporation Forms Partnership with Agilysys

FOR IMMEDIATE RELEASE

TMx™ Labor Management Solution Now Integral Piece of the Comprehensive Hospitality Solutions from Agilysys

MINNEAPOLIS—February 17, 2010—TimeManagement Corporation, a labor management solution provider, has announced a strategic partnership with Agilysys, Inc. (Nasdaq: AGYS), a leading provider of innovative information technology and hospitality software solutions to offer the TMx labor management solution to hospitality customers who use the Eatec® Solutions inventory and procurement system, the InfoGenesis™ POS system and the Visual One™ Property Management System, all by Agilysys.

As one of the leading hospitality and food service technology providers worldwide, Agilysys provides powerful and innovative solutions to major hotels, casinos, cruise lines, sports/entertainment venues and managed food service operations. Agilysys solutions offer reliability, functionality and control over every aspect of your operation, including property management, point-of-sale (POS), dining reservations, inventory & procurement, analytics, self-service, document management and more. With the addition of the TMx labor solution, Agilysys has an unparalleled offering for chain restaurant and food service operators providing complete back office labor and inventory, shared forecasts, above store P & L food and labor cost reporting and much more. The TMx Data Transfer Module allows for seamless integration of scheduling, time and attendance, human resources and labor forecasting functions into the Agilysys systems for foodservice management, point-of-sale and property management. TMx uses the data fields within a customer's system to create labor forecasts and other performance measures; transfer employee time records; and allocate tips, sales and other collectibles.

“In the current economy, hospitality providers are looking for ways to conserve resources while increasing productivity,” said Tina Stehle, senior vice president and general manager of Agilysys Hospitality Solutions Group. “With the addition of the TMx labor management solution to our systems for property management, point-of-sale and foodservice management, we can offer a one-stop shop for a complete and integrated back-office solution, particularly in the restaurant and foodservice marketplace. We are pleased to partner with TimeManagement Corporation to offer a truly innovative solution that enables restaurants, hotels, resorts and other hospitality venues to streamline operations, enhance guest service and remain competitive.”

The Agilysys solutions and TMx applications share data — such as sales totals, transactions, meal counts, occupancy and arrivals — enabling improved access to information and reducing redundant data entry. Customers in virtually every type of hospitality setting can benefit from the integrated solution, including restaurants, hotels, resorts, casinos, cruise lines and sporting and entertainment venues.

“The TMx labor management solution offers a low-risk, high-performance way to address labor costs, which are typically a hospitality customer’s largest controllable cost,” said Barrs Lewis, President at TimeManagement Corporation. “Having the Agilysys systems for foodservice management, point-of-sale and property management tightly integrated with TMx, offers our joint customers a powerful solution that not only reduces labor costs but also improves decision-making and aligns corporate best practices into daily activities.”

About TimeManagement Corporation
